

Zen Garden with “Nature in the City” Theme

Lynnette Beatty’s thoughts on the final Zen Garden Website:

1. I worked on the Main section of the Zen Garden Website.

- I used images that illustrated evidence of nature within a city landscape.
- The images I used showed trees, flowers, and grass growing in and around the buildings and walkways of modern cities.
- The images provided a beautiful backdrop for the text overlays.
- For the footer, I took the external links and transformed them on hover into CSS shapes with animation.

2. I also did the overall layout of our website.

- I used a grid layout in the medium and large views and flex in the small view.
- I also used flex separately in the 3 sections: intro, main, and sidebar.
- Within the footer of the main section, I used a grid layout to position the external links properly.

3. I also created the style.scss and the associated import files: variables, intro, main, and sidebar.

Problems:

1. How can the layout of the website view correctly in small, medium, and large views?

- This took some careful planning to figure out the best method to have a responsive site.
- To visually see how to implement the layout, I drew out my plan on paper.
- Then I tested the layout at each step to make sure it looked correct.

2. How can I do a live view of the website in the browser using Visual Studio text editor?

To open Live Server, in VScode, click on the extensions (group of squares on left side) type "live server" and enter. Then install it. Then right-click on a file and choose "open with Live Server".

After I opened the index.html with Live Server, it is viewing correctly and everything is there - even the picture of the city.

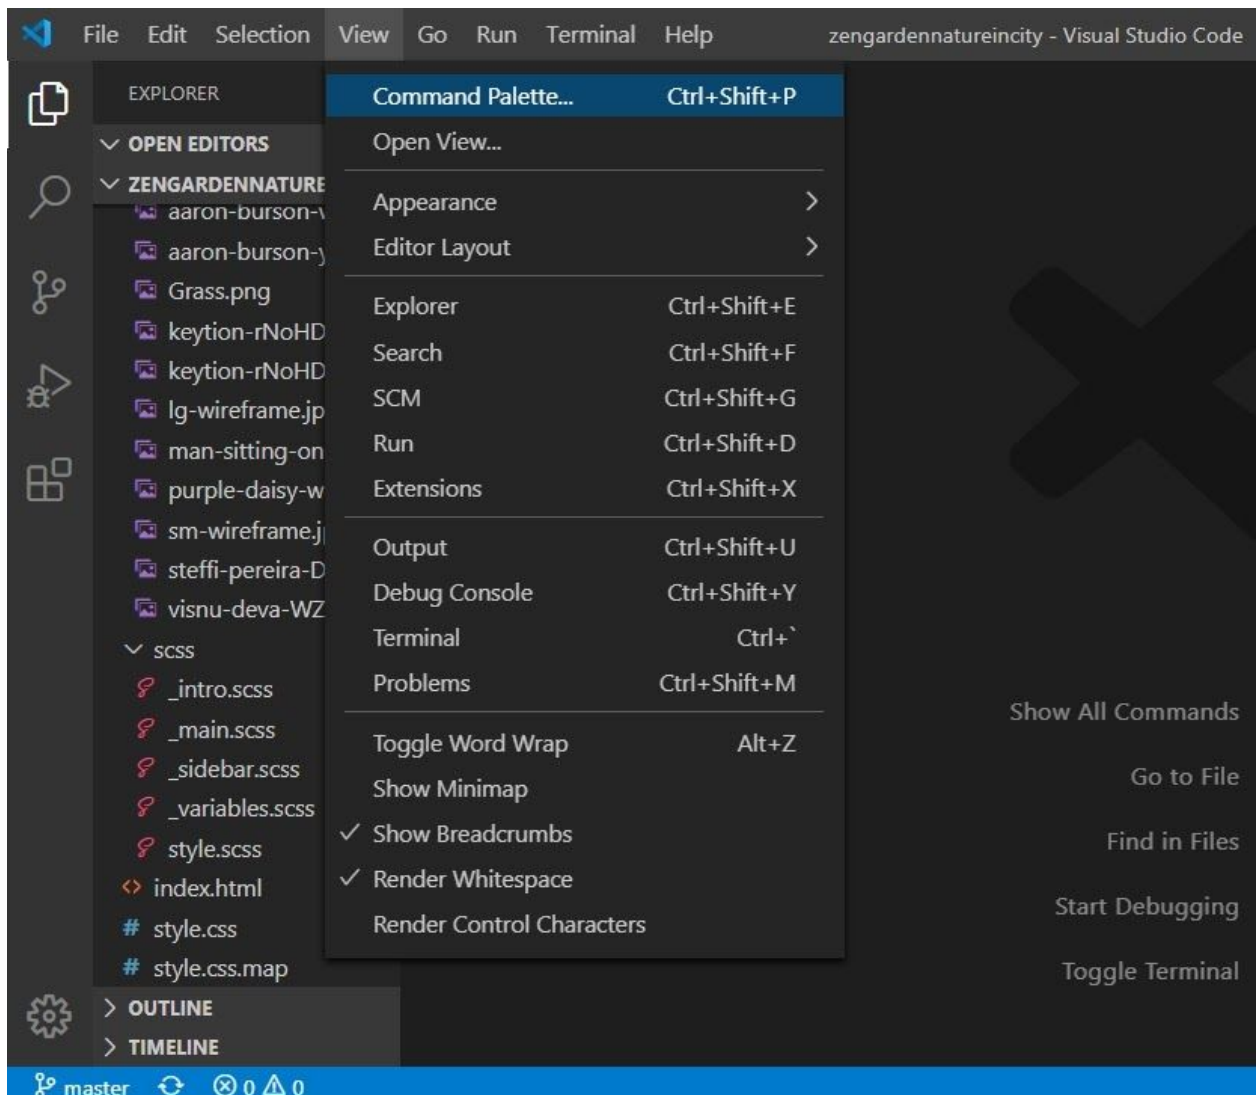

3. How can I do a clone of the github repository?

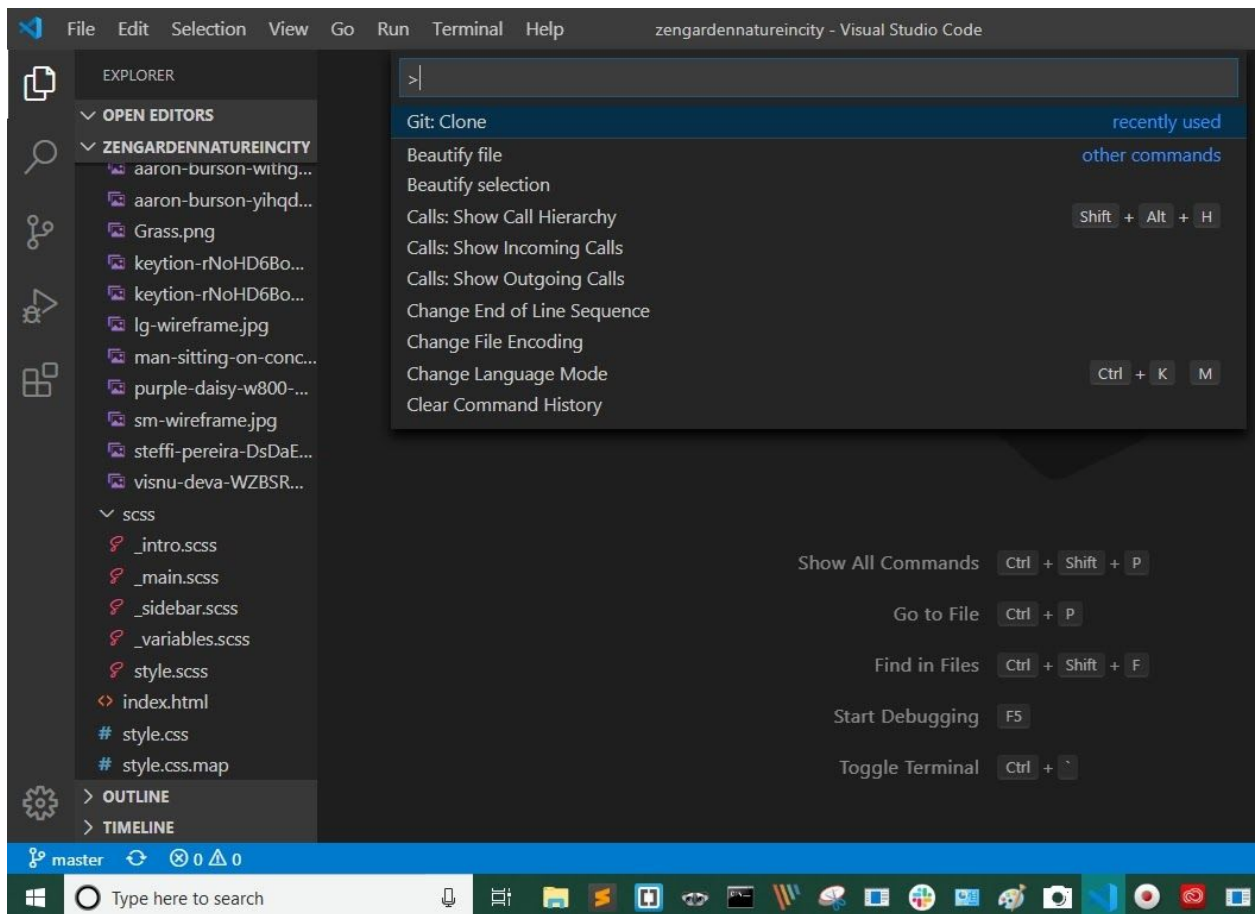

How to do it at the command line prompt:

```
> git clone https://github.com/alley/zengardennatureincity.git d:\BYU Idaho\WDD331\Zen Garden\Zen Garden Code\zengardennatureincity-1 --progress
Cloning into 'd:\BYU Idaho\WDD331\Zen Garden\Zen Garden Code\zengardennatureincity-1'...

```

How to do it in VScode:

4. The text overlays covered up the images in the main section.

- I applied margins to the text so more of the image could be seen.
- I used a reduced opacity to be able to “see through” the overlays into the image beneath it.
- I increased the font size and weight to be able to read the text clearly.

5. The paragraphs in each section were disconnected from each other with space between them.

- Each paragraph has a default margin. I overrode the default by putting margin: 0; for each div.
- Example... `#zen-participation > p { margin: 0; }`
- Then each paragraph abutted each other. This made it look like one continuous overlay.

6. How can I add animated shapes to our website?

- After much thought, I realized that I didn't need an empty div to place the shape into.
- I used the anchor tag in the footer.
- I embedded the css shapes into the hover state of the anchor tag.
- These shapes took patience and many adjustments to get them to look and perform just the way I wanted them to.

7. The first time I ran our Zen Garden code, all I saw in the browser was the html.

- I realized that I needed to compile the CSS.
- I used "Koala" to compile the CSS.
- In the browser, I saw that the CSS still wasn't being applied.
- Within "Koala", I changed the location of the style.css file to be located at the root level.
- The Zen Garden viewed correctly with all of the CSS applied!

8. The load time of our website was slow in the browser.

- I made the images used in the main section a smaller size and gave them a low resolution.
- The website loaded quickly in the browser..

My favorite part of the project:

My favorite part of the Zen Garden project is the main section - because it is the one I worked on. I really love the way the main section looks with the images and text overlays, all framed by a pink border. I also am happy with the outcome of the CSS shapes. I learned so much about CSS border shapes, transitions, and animations by doing this activity. I am very pleased with the way the main section turned out.
